Database Programming with SQL
1-3: Anatomy of a SQL Statement
Practice Activities

Objectives
- Match projection, selection, and join with their correct functions capabilities
- Create a basic SELECT statement
- Use the correct syntax to display all rows in a table
- Use the correct syntax to select specific columns in a table, modify the way data is displayed,and perform calculations using arithmetic expressions and operators
- Formulate queries using correct operator precedence to display desired results
- Define a null value
- Demonstrate the effect null values create in arithmetic expressions
- Construct a query using a column alias

Vocabulary
Identify the vocabulary word for each definition below.

- Display data from two or more related tables.
  - *JOIN*
- A symbol used to perform an operation on some values.
  - *Operator*
- An implementation of an attribute or relationship in a table.
  - *Column*
- The capability in SQL to choose the columns in a table that you want returned from a query.
  - *SELECT*
- A value that is unavailable, unassigned, unknown, or inapplicable.
  - *NULL*
- Renames a column heading.
  - *Alias*
- A mathematical equation.
  - *Arithmetic Operation*
- The capability in SQL to choose the rows in a table returned from a query.
  - *SELECT*
- Retrieves information from the database
  - *SELECT*
- Specifies the columns to be displayed
  - *SELECT*
- Specifies the table containing the column listed in the select clause

- ○ *FROM*
- An individual SQL command
  - ○ *Keyword*
- Part of a SQL statement
  - ○ *Clause*
- A combination of the two clauses
  - ○ *JOIN*

Try It / Solve It

Now you know the basics of a SELECT statement, It's time to practice what you've learned.

1. Write a SQL statement that demonstrates projection.
   a. *SELECT first_name, last_name, email*
      FROM employees;
2. Write a query that displays the last_name and email addresses for all the people in the DJs on Demand d_client table. The column headings should appear as "Client" and "Email Address."
   a. *SELECT last_name AS Client, email AS "Email Address"*
      FROM d_client;
3. The manager of Global Fast Foods decided to give all employees at 5%/hour raise + a $.50 bonus/hour. However, when he looked at the results, he couldn't figure out why the new raises were not as he predicted. Ms. Doe should have a new salary of $7.59, Mr. Miller's salary should be $11.00, and Monique Tuttle should be $63.50. He used the following query. What should he have done?
      SELECT last_name, salary *.05 +.50
      FROM f_staffs;
   a. *UPDATE f_staffs*
      *SET salary = salary * 1.05 + 0.50;*
4. Which of the following would be the easiest way to see all rows in the d_songs table?
   a. SELECT id, title, duration, artist, type_code
   b. SELECT columns
   c. *SELECT **
   d. SELECT all

5. If tax = 8.5% * car_cost and license = car_cost * .01%, which value will produce the largest car payment?
   a. Payment = (car_cost * 1.25) + 5.00 - (tax) - (license)

b. Payment = car_cost * 1.25 + 5.00 - (tax - license)

6. In the example below, identify the keywords, the clause(s), and the statement(s):
    a. SELECT employee_id, last_name
       FROM employees
           i. *Keyword: SELECT and FROM*
           ii. *Clauses: SELECT employee_id, last_name*
               FROM employees
7. Label each example as SELECTION or PROJECTION.
    a. Please give me Mary Adam's email address.
           i. *SELECTION*
    b. I would like only the manager_id column, and none of the other columns.
           i. *PROJECTION*
8. Which of the following statements are true?
    a. null * 25 = 0;
    b. null * 6.00 = 6.00
    c. *null * .05 = null*
    d. (null + 1.00) + 5.00 = 5.00
9. How will the column headings be labeled in the following example?
               SELECT bear_id bears, color AS Color, age "age"
               FROM animals;
    a. bears, color, age
    b. BEARS, COLOR, AGE
    c. BEARS, COLOR, age
    d. *bears, Color, age*
10. Which of the following words must be in a SELECT statement in order to return all rows?
    a. SELECT only
    b. *SELECT and FROM*
    c. FROM only
    d. SELECT * only

Database Programming with SQL
2-1: Working with Columns, Characters, and Rows
Practice Activities

Objectives

● Apply the concatenation operator to link columns to other columns, arithmetic expressions, or constant values to create a character expression
● Use Column Aliases to rename columns in the query result

- Enter literal values of type character, number, or date into a SELECT statement
- Define and use DISTINCT to eliminate duplicate rows
- Display the structure of a table using DESCRIBE or DESC
- Edit, execute, and save SQL statements in Oracle Application Express

Vocabulary

Identify the vocabulary word for each definition below.

- A command that suppresses duplicates
  - *DISTINCT*
- Links two columns together to form one character data column
  - *CONCAT*
- A group of character data
  - *STRING*
- An SQL plus command that displays the structure of a table
  - *DESCRIBE (DESC)*

Try It / Solve It

1. The manager of Global Fast Foods would like to send out coupons for the upcoming sale. He wants to send one coupon to each household. Create the SELECT statement that returns the customer last name and a mailing address.
   a. *SELECT DISTINCT last_name, mailing_address*
      FROM customers;
2. Each statement below has errors. Correct the errors and execute the query in Oracle Application Express.
   a. SELECT first name
      FROM f_staffs;
      SELECT first_name
      FROM f_staffs;
   b. SELECT first_name |" " | last_name AS "DJs on Demand Clients"
      FROM d_clients;
      SELECT first_name || ' ' || last_name AS "DJs on Demand Clients"
      FROM d_clients;
   c. SELECT DISCTINCT f_order_lines
      FROM quantity;
      SELECT DISTINCT f_order_lines
      FROM quantity;
   d. SELECT order number
      FROM f_orders;

> *SELECT order_number*
> *FROM f_orders;*

3. Sue, Bob, and Monique were the employees of the month. Using the f_staffs table, create a SELECT statement to display the results as shown in the Super Star chart.

Super Star
*** Sue *** Sue ***
*** Bob *** Bob ***
*** Monique *** Monique ***

> *SELECT first_name, 'Super Star' AS status*
> *FROM f_staffs;*

4. Which of the following is TRUE about the following query?
> SELECT first_name, DISTINCT birthdate
> FROM f_staffs;
   a. Only two rows will be returned.
   b. Four rows will be returned.
   c. Only Fred 05-Jan-1988 and Lizzie 10-Nov-1987 will be returned.
   d. *No rows will be returned.*
      i. *DISTINCT can not be used that way*

5. Global Fast Foods has decided to give all staff members a 5% raise. Prepare a report that presents the output as shown in the chart.

EMPLOYEE LAST NAME	CURRENT SALARY	SALARY WITH 5% RAISE

   a. *SELECT first_name, last_name, salary AS current_salary, salary * 1.05 AS new_salary*
      FROM employees

6. Create a query that will return the structure of the Oracle database EMPLOYEES table. Which columns are marked "nullable"? What does this mean?
   a. *SELECT column_name, nullable, data_type, data_length*
      FROM user_tab_columns
      WHERE table_name = 'EMPLOYEES';
   b. *Nullable means that the column does not have a value*

7. The owners of DJs on Demand would like a report of all items in their D_CDs table with the following column headings: Inventory Item, CD Title, Music Producer, and Year Purchased. Prepare this report.
   a. *SELECT inventory_item, CD_title, music_producer, year_purchased*
      FROM d_cds

8. *True*/False -- The following SELECT statement executes successfully:
   SELECT last_name, job_id, salary AS Sal
   FROM employees;

9. *True*/False -- The following SELECT statement executes successfully:

    SELECT *
    FROM job_grades;

10. There are four coding errors in this statement. Can you identify them?

    SELECT employee_id, last_name,
    sal *x(*)* 12 *AS* ANNUAL SALARY
    FROM employees;

11. In the arithmetic expression salary*12 - 400, which operation will be evaluated first?
    Multiplication

12. Which of the following can be used in the SELECT statement to return all columns of data in the Global Fast Foods f_staffs table?
    a. column names
    b. *

    c. DISTINCT id
    d. both a and b

13. Using SQL to choose the columns in a table uses which capability?
    a. selection
    b. projection
    c. partitioning
    d. join

14. SELECT last_name AS "Employee". The column heading in the query result will appear as:
    a. EMPLOYEE
    b. employee
    c. Employee
    d. "Employee:

15. Which expression below will produce the largest value?
    a. SELECT salary*6 + 100
    b. SELECT salary (6 + 100)*
    c. SELECT 6(salary+ 100)
    d. SELECT salary+6*100

16. Which statement below will return a list of employees in the following format?
Mr./Ms. Steven King is an employee of our company.
    a. SELECT "Mr./Ms."||first_name||' '||last_name 'is an employee of our company.' AS "Employees"
        FROM employees;
    b. SELECT 'Mr./Ms. 'first_name,last_name ||' '||'is an employee of our company.'
        FROM employees;

    c. SELECT 'Mr./Ms. '||first_name||' '||last_name ||' '||'is an employee of our
       company.' AS "Employees"
       FROM employees ;
    d. SELECT Mr./Ms. ||first_name||' '||last_name ||' '||"is an employee of our
       company." AS "Employees"
       FROM employees

17. Which is true about SQL statements?
    a. SQL statements are case-sensitive
    b. SQL clauses should not be written on separate lines.
    c. Keywords cannot be abbreviated or split across lines.
    d. SQL keywords are typically entered in lowercase; all other words in
       uppercase.

18. Which queries will return three columns each with UPPERCASE column headings?
    a. SELECT "Department_id", "Last_name", "First_name"
       FROM employees;
    b. SELECT DEPARTMENT_ID, LAST_NAME, FIRST_NAME
       FROM employees;
    c. SELECT department_id, last_name, first_name AS UPPER CASE
       FROM employees
    d. SELECT department_id, last_name, first_name
       FROM employees;

19. Which statement below will likely fail?
    a. SELCT * FROM employees;
    b. Select * FROM employees;
    c. SELECT * FROM EMPLOYEES;
    d. SelecT FROM employees;*

20. Click on the History link at the bottom of the SQL Commands window. Scroll or use the arrows at the bottom of the page to find the statement you wrote to solve problem 3 above. (The one with the column heading SuperStar). Click on the statement to load it back into the command window. Execute the command again, just to make sure it is the correct one that works. Once you know it works, click on the SAVE button in the top right corner of the SQL Commands window, and enter a name for your saved statement. Use your own initials and "_superstar.sql", so if your initials are CT then the filename will be CT_superstar.sql.

Log out of OAE, and log in again immediately. Navigate back to the SQL Commands window,
click the Saved SQL link at the bottom of the page and load your saved SQL statement into the

Edit window. This is done by clicking on the script name. Edit the statement, to make it display +
instead of *. Run your amended statement and save it as initials_superplus.sql.

Database Programming with SQL
2-2: Limit Rows Selected
Practice Activities

Objectives
- Apply SQL syntax to restrict the rows returned from a query
- Demonstrate application of the WHERE clause syntax
- Explain why it is important, from a business perspective, to be able to easily limit data retrieved from a table
- Construct and produce output using a SQL query containing character strings and date values

Vocabulary
Identify the vocabulary word for each definition below.

- Restricts the rows returned by a select statement
  - *WHERE*
- Compares one expression to another value or expression
  - *=, <, >, <=, >=, !=*

Try It / Solve It
1. Using the Global Fast Foods database, retrieve the customer's first name, last name, and address for the customer who uses ID 456.
   a. *SELECT first_name, last_name, address*
      FROM customers
      WHERE customer_id = 456;
2. Show the name, start date, and end date for Global Fast Foods' promotional item "ballpen and highlighter" giveaway.
   a. *SELECT name, start_date, end_date*
      FROM promotions
      WHERE promotion_item = 'ballpen and highlighter' ;
3. Create a SQL statement that produces the following output: Oldest The 1997 recording in our database is The Celebrants Live in Concert
   a. *SELECT 'The ' || title AS Oldest*
      FROM recordings
      WHERE year = 1997

ORDER BY title LIMIT 1;

4. The following query was supposed to return the CD title "Carpe Diem" but no rows were returned.
   a. Correct the mistake in the statement and show the output.
      > SELECT produce, title
      > FROM d_cds
      > WHERE title = 'carpe diem' ;

      SELECT produce, title
      FROM d_cds
      WHERE title = 'Carpe Diem';

5. The manager of DJs on Demand would like a report of all the CD titles and years of CDs that were produced before 2000.
   a. *SELECT titles, year*
      FROM d_cds
      WHERE year <2000;

6. Which values will be selected in the following query?
   > SELECT salary
   > FROM employees
   > WHERE salary < = 5000;
   a. *5000*
   b. *0 - 4999*
   c. *2500*
   d. *5*

For the next three questions, use the following table information:
TABLE NAME: students
COLUMNS:
studentno NUMBER(6)
fname VARCHAR2(12)
lname VARCHAR(20)
sex CHAR(1)
major VARCHAR2(24)

7. Write a SQL statement that will display the student number (studentno), first name (fname), and last name (lname) for all students who are female (F) in the table named students.

SELECT studentno, fname, name
FROM students
WHERE sex = F;

8. Write a SQL statement that will display the student number (studentno) of any student who has a PE major in the table named students. Title the studentno column Student Number.

SELECT studentno AS "Student Number"
FROM students
WHERE major = 'PE';

9. Write a SQL statement that lists all information about all male students in the table named students.

SELECT *
FROM students
WHERE sex = 'M';

10. Write a SQL statement that will list the titles and years of all the DJs on Demand CDs that were not produced in 2000.

SELECT titles, years
FROM d_cds
WHERE year != 2000;

11. Write a SQL statement that lists the Global Fast Foods employees who were born before 1980.

SELECT first_name, last_name, year
FROM employees
WHERE year <1980;

Database Programming with SQL
2-3: Comparison Operators
Practice Activities

Objectives
- Apply the proper comparison operator to return a desired result
- Demonstrate proper use of BETWEEN, IN, and LIKE conditions to return a desired result
- Distinguish between zero and the value of NULL as unavailable, unassigned, unknown, or inapplicable
- Explain the use of comparison conditions and NULL

Vocabulary
Identify the vocabulary word for each definition below.

- This option identifies that the escape characters should be interpreted literally
  - *Escaped characters*
- Condition tests for null values

- - ○ *NULL check*
- Displays rows based on a range of values
    - ○ *Range filter*
- Including the specified limits and the area between them; the numbers 1-10, inclusive
    - ○ *Inclusive range*
- Selects rows that match a character pattern
    - ○ *Pattern matching*
- Tests for values in a specified list of values
    - ○ *IN clause*

Try It / Solve It

1. Display the first name, last name, and salary of all Global Fast Foods staff whose salary is between $5.00 and $10.00 per hour.
    a. *SELECT first_name, last_name, salary*
    FROM staff
    WHERE salary BETWEEN 5.00 AND 10.00;
2. Display the location type and comments for all DJs on Demand venues that are Private Home.
    a. *SELECT location_type, comments*
    FROM djs
    WHERE venues = 'Private Home';
3. Using only the less than, equal, or greater than operators, rewrite the following query:

    SELECT first_name, last_name
    FROM f_staffs
    WHERE salary BETWEEN 20.00 and 60.00;

    SELECT first_name, last_name
    FROM f_staffs
    WHERE salary >= 20.00 AND salary <= 60.00;
4. Create a list of all the DJs on Demand CD titles that have "a" as the second letter in the title.
    a. *SELECT titles*
    FROM djs
    WHERE title LIKE '_a%';
5. Who are the partners of DJs on Demand who do not get an authorized expense amount?
    a. *SELECT partner_name*
    FROM partners

6. Select all the Oracle database employees whose last names end with "s". Change the heading of the column to read Possible Candidates.

   a. *SELECT last_name AS "Possible Candidates"*
      FROM employees
      WHERE last_name LIKE '%s'; '

7. Which statement(s) are valid?

   a. WHERE quantity <> NULL;
   b. WHERE quantity = NULL;
   c. *WHERE quantity IS NULL;*
   d. WHERE quantity != NULL;

8. Write a SQL statement that lists the songs in the DJs on Demand inventory that are type code 77, 12, or 1.

   a. *SELECT song_title*
      FROM djs_on_demand_inventory
      WHERE type_code IN (77, 12, 1);

Database Programming with SQL
3-1: Logical Comparisons and Precedence Rules
Practice Activities

Objectives

- Evaluate logical comparisons to restrict the rows returned based on two or more conditions
- Apply the rules of precedence to determine the order in which expressions are evaluated and calculated

Vocabulary
Identify the vocabulary word for each definition below.

- Inverts the value of the condition
  - *NOT*
- Both conditions must be true for a record to be selected
  - *AND*
- Rules that determine the order in which expressions are evaluated and calculated
  - *Operator precedence*
- Either condition can be true for a record to be selected
  - *OR*

Try It / Solve It

1. Execute the two queries below. Why do these nearly identical statements produce two different results? Name the difference and explain why.

>   SELECT code, description
>   FROM d_themes
>   WHERE code >200 AND description IN('Tropical', 'Football', 'Carnival');
>
>   SELECT code, description
>   FROM d_themes
>   WHERE code >200 OR description IN('Tropical', 'Football', 'Carnival');

   First one uses AND , the second one uses OR. They are different because AND requires both the conditions to be true while OR only requires one condition to be true.

2. Display the last names of all Global Fast Foods employees who have "e" and "i" in their last names.

   a. *SELECT last_name*
      FROM employees
      WHERE last_name LIKE '%e' AND last_name LIKE '%i';

3. I need to know who the Global Fast Foods employees are that make more than $6.50/hour and their position is not an order taker.

   a. *SELECT name*
      FROM employees
      WHERE pay > 6.50 AND position != "order taker";

4. Using the employees table, write a query to display all employees whose last names start with "D" and have "a" and "e" anywhere in their last name.

   a. *SELECT last_name*
      FROM employees
      WHERE last_name LIKE 'D%' AND last_name LIKE '%a%' AND last_name LIKE '%e%';

5. In which venues did DJs on Demand have events that were not in private homes?

   a. *SELECT name*
      FROM venues
      WHERE events != 'private homes'

6. Which list of operators is in the correct order from highest precedence to lowest precedence?

   a. AND, NOT, OR
   b. NOT, OR, AND
   c. *NOT, AND, OR*

For questions 7 and 8, write SQL statements that will produce the desired output.

7. Who am I?
I was hired by Oracle after May 1998 but before June of 1999. My salary is less than $8000 per month, and I have an "en" in my last name.
SELECT name
FROM employees
WHERE last_name LIKE '%en%' AND salary < 8000 AND hire_date BETWEEN '1998-06-01' AND '1999-05-31';
8. What's my email address?
Because I have been working for Oracle since the beginning of 1996, I make more than $9000 per month. Because I make so much money, I don't get a commission.
SELECT email_address
FROM employees
WHERE salary > 9000 AND hire_date < '1996-01-01';

Database Programming with SQL
3-2: Sorting Rows
Practice Activities

Objectives
- Construct a query to sort a result set in ascending or descending order
- State the order in which expressions are evaluated and calculated based on the rules of precedence
- Construct a query to order a result set using a column alias
- Construct a query to order a result set for single or multiple columns

Vocabulary
Identify the vocabulary word for each definition below.

- Orders the rows in ascending order (the default order); A-Z
  - *ASC*
- Orders the rows in descending order: Z-A
  - *DESC*
- To arrange according to class, kind, or size
  - *Sort*

Try It / Solve It

1. In the example below, assign the employee_id column the alias of "Number."
   Complete the SQL statement to order the result set by the column alias.

   SELECT employee_id, first_name, last_name
   FROM employees;

   SELECT employee_id AS "Number", first_name, last_name
   FROM employees
   ORDER BY "Number";

2. Create a query that will return all the DJs on Demand CD titles ordered by year with titles in alphabetical order by year.

   a. *SELECT title, year*
      FROM djs
      ORDER BY year, title;

3. Order the DJs on Demand songs by descending title. Use the alias "Our Collection" for the song title.

   a. *SELECT title AS "Our Collection"*
      FROM djs
      ORDER BY "Our Collection" DESC;

4. Write a SQL statement using the ORDER BY clause that could retrieve the information needed. Do not run the query.

   Create a list of students who are in their first year of school. Include the first name, last name, student ID number, and parking place number. Sort the results alphabetically by student last name and then by first name. If more than one student has the same last name, sort each first name in Z to A order. All other results should be in alphabetical order (A to Z).

   a. *SELECT first_name, last_name, student_id, parking_num*
      FROM students
      WHERE year = 1
      ORDER BY last_name ASC, first_name DESC;

5. Write a SQL statement using the employees table and the ORDER BY clause that could retrieve the information in the following table. Return only those employees with employee_id<125.

DEPARTMENT_ID	LAST_NAME	MANAGER_ID
90	Kochhar	100
90	King	(null)
90	De Haan	100
60	Lorentz	103
60	Hunold	102
60	Ernst	103
50	Mourgos	100

   a. *SELECT department_id, last_name, manager_id*
      FROM employees
      WHERE employee_id<125

Extension Activities

1. Limiting values with the WHERE clause is an example of:
    a. Projection
    b. Ordering
    c. Joining
    d. Grouping
    e. *Selection*
2. You want to sort your CD collection by title, and then by artist. This can be accomplished using:
    a. WHERE
    b. SELECT
    c. *ORDER BY*
    d. DISTINCT
3. Which of the following are SQL keywords?
    a. *SELECT*
    b. ALIAS
    c. COLUMN
    d. *FROM*
4. Which of the following are true?
    a. *Multiplication and division take priority over addition.*
    b. *Operators of the same priority are evaluated from left to right.*
    c. *Parentheses can be used to override the rules of precedence.*
    d. None of the above are true.

5. The following query was written:
    SELECT DISTINCT last_name
    FROM students
    a. To select all the outstanding students
    b. To choose last names that are duplicates
    c. *To select last names without duplicates*
    d. To select all last names
6. The following string was created using which SELECT clause?
    Abby Rogers is an order taker for Global Fast Foods
    a. SELECT first_name ||' ' ||last_name ||' is an ' staff_type ' for Global Fast Foods'
    b. SELECT Abby Rogers is an ||staff_type||' for Global Fast Foods'
    c. SELECT first_name,last_name '||staff_type||' for Global Fast Foods'
    d. *SELECT first_name ||' ' ||last_name ||' is an '||staff_type||' for Global Fast Foods'*

7. Which of the following SELECT clauses will return uppercase column headings?
   a. SELECT id, last_name, address, city, state, zip, phone_number;
   b. *SELECT ID, LAST_NAME, ADDRESS, CITY, STATE, ZIP, PHONE_NUMBER;*
   c. SELECT Id, Last_name, Address, City, State, Zip, Phone_number;
   d. SELECT id AS ID, last_name AS NAME, address AS ADDRESS, city AS CITY, state AS STATE, zip AS ZIP, phone_number AS PHONE_NUMBER;
8. Which SELECT statement will always return the last names in alphabetical order?
   a. SELECT last_name AS ORDER BY FROM employees
   b. *SELECT last_name FROM employees ORDER BY last_name*
   c. SELECT last_name FROM employees
   d. SELECT ASC last_name FROM employees
9. Which SELECT clause will return a column heading for employee_id called "New Employees"?
   a. SELECT last_name AS "New Employees"
   b. SELECT employee_id AS New Employees
   c. SELECT employee AS "New Employees"
   d. *SELECT employee_id AS "New Employees"*
10. Examine the following query:
    SELECT last_name, job_id, salary
    FROM employees
    WHERE job_id = 'SA_REP' OR job_id = 'AD_PRES' AND salary >15000;
Which results could not have been returned from this query?
   a. *Joe Everyone, sales representative, salary 15000*
   b. Jane Hendricks, sales manager, salary 15500
   c. Arnie Smithers, administration president, 20000
   d. *Jordan Lim, sales representative, salary 14000*

11. Finish this query so it returns all employees whose last names start with "St".
    SELECT last_name
    FROM employees
    WHERE last_name LIKE 'St%';
12. What salary values will not be returned from this query?
    SELECT last_name, first_name, salary
    FROM employees
    WHERE salary BETWEEN 1900 AND 2100;
    Any salary value less than 1900 and more then 2100
13. Correct each WHERE clause:
    a. WHERE department_id NOT IN (101,102,103);
    b. WHERE last_name = 'King';
    c. WHERE start_date LIKE '05-May-1998';

    d. WHERE salary IS BETWEEN 5000 AND 7000
       i. *WHERE salary BETWEEN 5000 AND 7000;*
    e. WHERE id != 10;
14. Which of the following values could be returned?
    SELECT prefix
    FROM phone
    WHERE prefix BETWEEN 360 AND 425
    OR prefix IN (206,253,625)
    AND prefix BETWEEN 315 AND 620;
    a. 625
    b. 902
    c. 410
    d. 499

Database Programming with SQL
3-3: Introduction to Functions
Practice Activities

Objectives
- Identify appropriate applications of single-row functions in query statements
- Classify a function as a single-row or multi-row function
- Differentiate between single-row functions and multirow functions and the result returned by each

Try It / Solve It

1. For each task, choose whether a single-row or multiple row function would be most appropriate:
    a. Showing all of the email addresses in upper case letters
       i. *Single row*
    b. Determining the average salary for the employees in the sales department
       i. *Multiple row*
    c. Showing hire dates with the month spelled out (September 1, 2004)
       i. *Single row*
    d. Finding out the employees in each department that had the most seniority (the earliest hire date)
       i. *Multiple row*
    e. Displaying the employees' salaries rounded to the hundreds place
       i. *Single row*
    f. Substituting zeros for null values when displaying employee commissions.

      i.   *Single row*

2. The most common multiple-row functions are: AVG, COUNT, MAX, MIN, and SUM. Give your own definition for each of these functions.
    a. *AVG: Sum of values in the column divided by number of rows*
    b. *COUNT: Number of rows in specific column*
    c. *MAX: highest number in column*
    d. *MIN: lowest number in column*
    e. *SUM: total sum of the columns*

3. Test your definitions by substituting each of the multiple-row functions into this query.

      SELECT FUNCTION(salary)
      FROM employees

    a. Write out each query and its results.

Determining the average salary for the employees in the sales department

SELECT AVG(salary) AS average_salary
FROM employees
WHERE department_id = (SELECT department_id FROM departments WHERE department_name = 'Sales');

Finding out the employees in each department that had the most seniority (the earliest hire date)

SELECT department_id, last_name, hire_date
FROM employees e1
WHERE hire_date = (
   SELECT MIN(hire_date)
   FROM employees e2
   WHERE e1.department_id = e2.department_id);
